¹ The Giga8d is the newest version of Giga models since 2014. The former 4 channel Giga4 is no longer produced. The Giga8d is an 8 ch. device that can be used in a 2, 4, or 8 ch recording mode (with the free Stylet+ software) and is smaller than the former Giga4.

² The 2017 Giga8d series will become available by **February 2017**. Initially we were intended to perform two innovations:

1) **emf mode probes** Probes* with a remote switch (to avoid insect disturbance) from normal-mode to emf-mode. IN emf-mode, measuring plant potentials becomes more accurately during stylet tip penetration into plant cells. Such EPG probes can be used with previous Giga8d devices as well. 2) **USB port powered** device, which would need no separate power supply any longer. Due to unexpected difficulties – however – we decided to postpone this innovation to implementation in a future version.
